

# UV STANDARD 801

## Certification

### Application for certification

The applicant submits a written application to CITEVE on the appropriate application form, with the description of the product, sign the declaration of conformity of conformity and send the samples in all colours that are to be certified.

### Testing

The samples are tested in CITEVE laboratories according to the strictest test conditions, this is, extreme use conditions and maximum radiation intensity.

### Certification

After testing the client receive the report with all values measured, the certificate and the UV STANDARD 801 label, that shall be used for labelling the certified products. An additional label can also be used, the hangtag.

### Certificate Renewal

At the end of the certificate validity, it can be renewed for the same period.

### Verification

The certificate and the authorization for labeling the products is valid during one year. During this period, CITEVE is entitled at any time to carry out control tests on the certified product by random sampling, aiming to improve consumer protection.
