Leveza Extrema ▪ *Extreme Light*

FATORES DE DIFERENCIAÇÃO

INNOVATION STATEMENT

«UDO – Unidirectional and biaxial fabrics. UDO is a product line for non-crimp unidirectional and biaxial fabrics. It is used worldwide in innovative low-weight construction work. Despite the use of fibres with an average or high filament count from 12k to 50k, the UDO line offers low areal weights and cost advantages. The product's special fibre structure is fixed by a single – or double-sided scrim. UDO opens up a wide range of applications, not least because of the different fabric widths available.»
