<b>Fabric reference</b>	4691TC
<b>Weight (g/m<sup>2</sup>)</b>	280
<b>Composition</b>	91%Cotton / 9%Elastane
<b>Brief description</b>	B.Cork™ - Coating focused on the concept of circular economy, developed based on the use of waste from the cork industry. Cork has ideal characteristics for clothing, conferring different types of characteristics such as waterproofness, breathability, high resistance, low density and thermal conductivity. This coating, with a cotton substrate, guarantees versatility at the aesthetic level since it allows cork waste to be dyed with the desired color that may or may not correspond to the color of the used substrate. A unique technology, where the used products are water-based, and the solvents do not have any toxic components. In this way, we combine the reuse of raw materials with the continuous concern for environmental preservation.
<b>Sustainability evidences</b>	Company certified ISO 14001 for the environmental management (certificate nº PT17/05995) + Bluesign® system partner (nº SPMT 024.405-22669) + STeP by OEKO-TEX® - sustainable textile production (certificate nº 15000512)
<b>Application field</b>	Fashion + Hometextiles
